

Sponsoring TEAM

Engineering studies, Management studies,

Our student initiative is based at ETH Zürich and inspires students across Switzerland in hands-on space engineering challenges through collaboration with academia and industry. Our main project is the participation at the [Spaceport America Cup](#).

Following our [Project TELL](#), ARIS participates at the Spaceport America Cup 2019 with a rocket using a commercial solid motor flying to 10'000 ft. For this, an interdisciplinary core team of 20 students is formed that builds the rocket and participates at the competition in the US.

The responsibility of the **Sponsoring Team** is to approach and convince sponsors to support ARIS and this year's project. You have to be comfortable presenting and pitching and you will be rewarded with contacts amongst key players in Switzerland. The work packages includes:

- Establish a network of partners in the private, industrial, governmental and academic sector
- Preparing project brochures, flyers, pitch presentations and design and organise sponsored marketing material
- Creating and customising exciting sponsoring packages
- Looking for and approaching potential sponsors
- Supporting and educating the teams in approaching sponsors
- Keep the network and sponsors updated

We recruit an interdisciplinary core team that is motivated and capable to accomplish the tasks above. You should love to interact with people and have a certain virtuosity. From our members, we expect the following attitude:

- Fail, get up and learn from it
- **You don't have to be a specialist** but you are willing to become one
- Join the team and grow as a unit
- Be proactive and able to take responsibility

We expect you to spend 2-3 days a week and be able to join team meetings and workshops in Zurich. Since we are a student association we don't hire any interns.

Send us a short description in what you're interested in and your CV (with picture) to
